

SOFTWARE THAT BRINGS TWO-FACTOR AUTHENTICATION TO EVERY EMPLOYEE

- **Secure desktop and network login** – “Connecting” Windows® with HID physical access control cards used by millions worldwide, for a strong, scalable solution, and extending a second factor to standard username & password authentication.
- **Multiple technologies** – Contactless HID Proximity, iCLASS®, and MIFARE®, as well as Crescendo® PKI and Citrix login can all be accommodated simultaneously.
- **Software that fits any organization** – Modular architecture provides versatile implementation options to suit both small business and Fortune 1000 company.
- **Knowledge based authentication** – Self-rescue for lost cards or forgotten passwords.

Simplicity is not sacrificed

Software is designed to give IT professionals flexibility in the design of a logical access implementation in Standalone, Server or Client-Server mode. Two components are included: Workstation and Server. Depending on the implementation mode, either or both components are installed.

Citrix Secure Logon

naviGO allows for secure logon to virtual environments, including Citrix XenApp and XenDesktop on shared workstations.

Strong PKI Functionality

naviGO Client-Server deployments enhance Windows PKI installations with easy to use credential lifecycle management functions.

Sensible Purchasing Model

Unlike comparable solutions on the market,

there are no per-seat, user or server models. Instead, purchased credential credits are individually applied to HID cards on the system, remaining there for the life of the card. This model makes it extremely simple and economical for companies of any size to implement logical access.

Maintenance and Support

Software and updates are provided at no cost. Free online support is available via HID Global's Support web portal and knowledge base. Additional extended support will include onsite installation service.

Free Trial

To receive a free trial version of naviGO, contact navigo@hidglobal.com, or visit www.hidglobal.com/navigo.

WORKSTATION FEATURES:

- PIN unblock and reset
- Knowledge-based Emergency Access with optional logon, PIN or password reset
- Ease-of-use in Enrollment & Provisioning
- Self-service for all supported card types
- Managements of logon options
- Tracking of Log-On events support audits and compliance
- Language support for French, German, Spanish, Italian, Portuguese, Russian, Japanese, Korean and Simplified Chinese.

SERVER FEATURES:

- Full web-based admin portal
- Full integration into MS Active Directory for easy user management
- Centralized policy management including Workstation logon options
- End-User Self-service portal for Enrollment, PIN reset & card replacement
- Easy deployment and provisioning of Strong Authentication

SPECIFICATIONS
